Sustainability Framework

The Leaseholder Sustainability Framework is a mechanism to assist community leaseholders to achieve more sustainable practices. Key objectives of this framework include high levels of organisational capacity, well maintained leased assets and evidence based future provision.

A series of actions and associated initiatives aimed at achieving each of these objectives has been put in place to implement the framework. This includes:

- Leaseholder Sustainability Framework
- Sustainability audits
- Maintenance and renewal program
- Sport sustainability and facility plans.

Information obtained from each of these initiatives is used in strategic planning to advocate for funding in City of Gold Coast’s budget process, inform the City of the development needs of the leaseholder and supporting information in grant applications, improve processes and develop programs.
