

# GCCC - Watersaver Education Program

## Conclusion

Information for teachers

**We encourage you to repeat the activities in this resource and continue in the delivery of our water conservation messages. Doing so will reinforce the key learnings from the previous activities and further encourage the children to foster good water saving behaviours both at home and within the broader community.**

You may also wish to use the attached Learning story template (see next page) to log the children's experiences throughout the program. This template has been designed specifically for your children's portfolios and is an excellent way to share their lessons with their parents.

### The 'Make your water mark!' Watersaver education program

The Early childhood program is an extension of the successful 'Make your water mark' Watersaver education program, allowing GCCC to be actively involved in all stages of the child-to-student-to-graduate education cycle.

This resource is written by teachers for teachers and aims to increase primary and secondary school student awareness about the value of a sustainable water future.

It is often said that the most critical years of learning are up to the age of five. At GCCC we believe that we can have a positive impact on a sustainable water future by teaching from an early age.

We hope that you have found this resource useful so that teaching water education is fun and beneficial to our Little Watersavers of the future!

## Acknowledgements

## Conclusion

Information for  
teachers

The 'Make your water mark!' Watersaver education early childhood program resource is an initiative of Gold Coast City Council in partnership with EnviroCom Australia.

EnviroCom Australia @ specialises in the provision of environmental management, education, communications and training for Government and industry throughout Australia. Their personnel are qualified and dedicated environmental practitioners with experience in the diverse disciplines of science, social marketing, training, teaching and communications.
