

**Lake Hugh Muntz  
Cyanobacteria Biovolume**

- The graph shows the biovolume of cyanobacteria (blue green algae) and potentially toxic cyanobacteria (potentially toxic blue green algae) over time. Samples are taken from four sites within the lake and are represented by different coloured lines.
- The National Health Medical Research Guidelines for Managing Risks in Recreational Waters 2008 (the National guidelines) set health based guidance values for cyanobacteria and potentially toxic cyanobacteria. The alert level is shown by the red horizontal dashed line.
